

BACKUP SERVICE

Did you just lose Programming in your QUIKPAGER?

Although QUIKPAGER has surge protectors, programming may be lost by uncontrollable power surges from the main power line or from the telephone line caused by strong lightning or heavy electrical equipment. Even if programming is not erased completely, QUIKPAGER will not operate properly after being hit by a power surge. QUIKPAGER can also lose programming when someone uses a two-way radio near the keyboard. **You are always at risk of losing programming.**

Do you have time to Re-program QUIKPAGER?

When programming is lost, you **must** reprogram QUIKPAGER again. You have to enter the paging company's access numbers, names and pager ID numbers. You also have to program Groups and canned messages. If you are using QUIKPAGER PageAlert, you must program each alert canned message and their monitor port assignment. **Depending on the number of pagers, programming can take from 1 to 8 hours. Do you have this time to spend next time this happens?**

QUIKPAGER Programming Storage Service

You can make your QUIKPAGER dial up and connect with the Canamex server where we will store the programming for you. You can upload the programming every time that you make changes such as adding a new user or changing a pager ID. When needed, **you can download the programming back to your QUIKPAGER in just THREE MINUTES.** The download will contain the same programming that you uploaded the last time.

Service Fees

Your QUIKPAGER can upload the programming information to the secure Canamex servers for safe storage for one year from the start date of service. The annual service fee includes the first upload. Canamex will charge an additional fee for each subsequent upload and download within the service term.
