RE: **Canamex PageRouter**

Attention: Canamex Customers

We began using Canamex onsite paging equipment in 1999 with the QUIKPAGER Wireless product and dual Canamex paging transmitters with hot standby. These original transmitters are still in operation today. We installed PageRouter software in 2001 to send messages from our network computers. In early 2008, we upgraded to PageRouter Pro and have not experienced any failures with this product, which sends over 5000 pages a day. Messages from our Nurse Call system, QUIKPAGER stand-alone keyboards and computers are delivered within seconds. I recommend PageRouter and the Canamex product line for applications where you need maximum performance with excellent factory support.

Sincerely,

Mick Walters
