DigiPager is another member of the QUIKPAGER family of products, which can be integrated with all the peripheral modules to achieve the most demanding applications.

DigiPager is a stand alone, desktop paging unit with internal UHF or VHF, synthesized transmitter available in 2 or 5 Watts. **DigiPager** has a numeric keypad to quickly page numeric or vibrate pagers. **DigiPager** can also be used to page alphanumeric messages received from external devices connected to its RS-232 port. **DigiPager** can page messages from **PageAlert**, the **4-Line Voice Prompt Unit**, **QUIKSERVER**, **Nurse Call Systems** and many other devices using TAP protocol.

Features

- ▶ Internal 2 or 5 Watt, synthesized transmitter with selectable carrier detection.
- ▶ UHF or VHF band.
- ▶ Frequency is programmable using any PC with programming kit.
- ▶ POCSAG protocol with programmable baud rate of 512, 1200 and 2400 per pager.
- ▶ Numeric keypad with heavy duty, sealed switches.
- ▶ 8,000 people can be paged by simply typing the pager ID or by receiving TAP messages via its RS-232 port.
- ▶ Directory for Names and Groups to program up to (96) pagers identified by short IDs appended with alphanumeric names.
- ▶ RS-232 port to receive TAP messages from external devices.

Send numeric messages from the keyboard

Transmit text messages delivered by external sources
