

PageRouter Pro

The Next Generation of Message Management Technology

PageAlert Modules

8 3/4" x 4 7/8" x 1 1/4"
(22 x 12.4 x 3.2 cm)

A PageAlert module PA-16 is used to monitor up to (16) relays and/or switch contacts. You can add up to (5) PA-16XT in a daisy-chain connection to monitor up to (96) contacts.

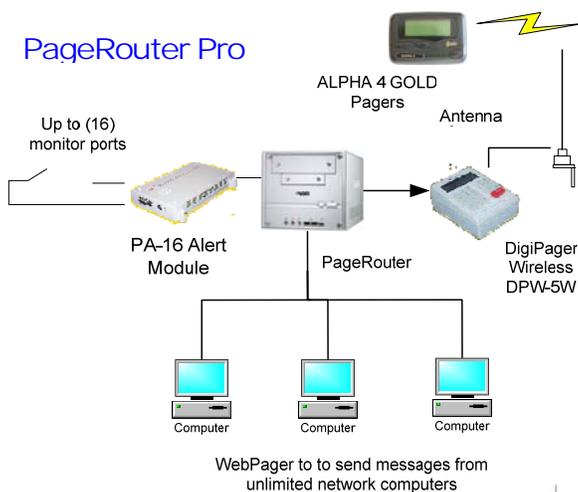

Any change on contact status on any PA-16/PA-16XT is reported to the Canamex paging system using a serial connection set at 2400 baud, 8, N, 1. For security and reliability, the contact status is sent to the paging system via a TAP message containing a Canamex status protocol.

While the PA-16 and PA16/XT are modules to monitor "dry" relay and/or switch contacts, the PA-16-VDC/PA-16XT-VDC are modules used to monitor voltage status from 0 to 24 VDC, ideal to trigger paging when a lamp goes on or off on a control panel.

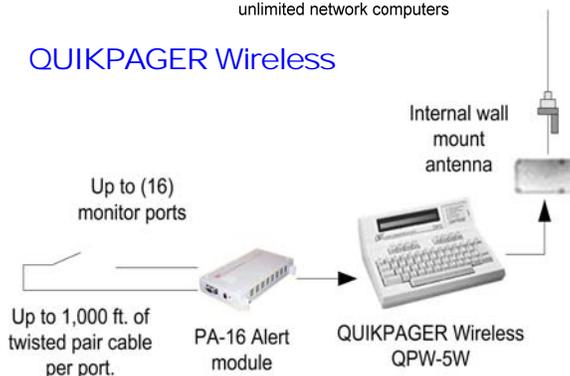

APPLICATION EXAMPLES

Page alerts from:

- PLC or machine relays closing
- Pressing door buttons at the truck dock
- Pressing a button by machine operators
- Relays of the alarm panel close or open
- Pressure or temperature gages close
- Lamps from control panel go on.

QUIKPAGER Wireless

PageAlert Messaging Systems		
Operator or Automated System using PageAlert	Small facilities	Medium to Large facilities
Model	QUIKPAGER Wireless	Page Router Software
PageAlert sets of (16) PageAlert Modules	1	12
Monitor contacts per set	96	96
PageAlert contact monitor modules	6	72
Total monitor contacts capacity	96	1152
Independent operation/program per set	Yes	Yes
Message characters per contact	18	2000
Program functions on keyboard	Yes	PC/Network
