PageRouter Pro

The Next Generation of Corporate Messaging Technology

USE PageAlert TO DELIVER PLC AND PRODUCTION ALARMS *IN SECONDS!*

- *Temperature*
- *Speed*
- *Humidity*
- *Weight*
- *Pressure*
- *Doors*
- *Volume*
- *Fans*

I receive PLC alarms on my in-house receiver, in seconds, telling me what just happened, saving response time and money.

Small Interior Antenna

Alarm Transmitter

Direct Serial Connection

PLC Rack

ALPH4 GOLD Intrinsically Safe Industrial Pocket Receivers with Holster

PageRouter Software

Each PageAlert module monitors 16 relay contacts

Up to 1,000 ft. cable.

PageAlert Features

- Use an **Unlimited** number of in-house receivers.
- Send text alarms created by PLC controllers or from existing alarm monitoring equipment, received via a **Direct Serial Connection**.
- Monitor **hundreds** of PLC relay contacts.
- Program a **specific alarm message** for each contact.
- Send alarm on contact **close, open or both**.
- Assign each contact to one or more recipients by **drag-and-drop operation**.
- Program **escalation** to other recipients if a contact does not return to original status within a programmable period.
- For each contact, program alarm **repeats**, **delays**, and contact **bounce** periods.
- Authorized staff can **send messages from any computer in the network** by using a browser.
- Obtain a **detailed log** with date and time of transmission, name of recipients and text of each message.

WHY FACTORIES NEED PageAlert

- PageAlert notifies manufacturing alarms to staff, **WITHIN SECONDS**.
- Factories spend thousands of Dollars in alarm monitoring systems, PLC controllers and sophisticated equipment to maintain a smooth production. However, when there is an alarm triggered by PLC relays, or by alarm monitoring equipment, the most important thing is to notify the alarm quickly, within seconds, to staff in the plant who can respond immediately.
- PageAlert can connect to existing alarm monitoring systems or it can connect to a large number of PLC relay contacts.
- With PageAlert, you can program specific text messages for each PLC contact and trigger conditions such as contact close, open or both. You can also program repeats, delays, bounce and escalation for each contact.
- PageAlert allows assigning a contact alarm for transmission to one or to a group of people carrying a PageAlert text receiver, which will vibrate and beep to announce the alarm, NEEDED IN HIGH NOISE ENVIRONMENTS.

SEND MESSAGES FROM UNLIMITED NETWORK COMPUTERS

Sending messages from any network computer is very easy.

Simply open a browser and login to your PageRouter Pro running on a computer connected to your network.

YOU DO NOT NEED TO INSTALL PageRouter Pro ON YOUR COMPANY'S SERVER.

Install PageRouter Pro on any network **desktop** computer running Windows 7 Professional, Windows VISTA Professional, Windows 2003 Server or Windows 2008 server, whatever is more convenient for your operations. Contact us for assistance.
