

PageRouter Platform

PageRouter is a professional software and hardware system that is revolutionizing the way of integrating and managing messages in Hospitals and Factories where each messages is critical. PageRouter has many useful and practical features offering savings and prompt message delivery at a Central and Remote Locations, regardless of the distance.

Sources of messages: PageRouter can send messages from a multitude of sources such as network computers, touch-tone telephones, Nurse Call Systems, monitoring equipment, PLC (Programmable Logic Control), alarm panels and other sources.

Destination of messages: PageRouter can send messages to onsite pagers, commercial pagers, mobile telephones, cellular telephones, Blackberries, PDAs and other messaging devices.

Log of messages: PageRouter provides detail records with date and time, transmission confirmation and the text of each message. You can search, filter and export the Log in different formats such as Excel, Adobe .pdf, .txt and others.

PageRouter is a **very reliable system** used at Hospitals and Factories for applications listed below:

PageRouter Pro

The Next Generation of Message Management Technology

- 1) **Onsite paging:** Text messages are delivered to onsite pagers in a few seconds using a Canamex transmitter, pagers and the necessary hardware.
- 2) **Message Integration:** PageRouter becomes the "Message Engine" receiving messages from multiple sources and routing them to multiple destinations. Messages from network computers, touch-tone telephones, nurse call systems and other applications are quickly sent to onsite pagers, SpectraLink phones, commercial pagers, Blackberries, email addresses, remote locations and cellular phones.
- 3) **Message Management:** Emergency Response and Department Supervisors can quickly create unlimited Groups. Supervisors can change people in Groups with fast **drag-and-drop** action to respond to any routine or emergency situation. Groups can be made of people with onsite and commercial pagers, wireless telephones, Blackberries, email addresses, etc.
- 4) **Message Networks:** Install PageRouter at each Hospital or Factory to establish a messaging network. By simply programming, messages from one PageRouter flow to other PageRouters. Routine and emergency messages are delivered across the network in a few seconds, regardless of the distance. PageRouters work at each location independently, but communicate messages from one to another to page staff at selected locations.
- 5) **Remote Locations:** A PageRouter at a central location can page staff at affiliated Nursing Homes, clinics, warehouses and other remote locations. Staff can send messages to other staff at their location or at other locations. Each Remote Location has a DigiPagerLink onsite transmitter that receives messages from PageRouter via the Intranet or the Internet on a secure connection.
- 6) **Emergency Response:** PageRouter can deliver messages in seconds to one or multiple remote locations. With an easy-to-use interface, Supervisors can send messages to selected Remote Locations, depending on the nature of the emergency. Each Remote Location can send messages back to staff at the Central location. Programming is very simple.
- 7) **Disaster Recovery:** PageRouter at any Hospital or Factory can be accessed from Remote Locations, even from the Internet! PageRouter uses encrypted protocols for communication protecting each message. PageRouter can be treated as a stand-alone system at each Hospital or Factory with the capability to communicate with other Locations in case of a disaster.
- 8) **Risk Management:** With patented Sentinel technology, you will know that each message was actually transmitted over the air to onsite pagers at local and remote locations by positing a confirmation in the Log; avoid litigations.

Contact our Sales Department for prices. We will prepare a system configuration according to your needs at no charge. PageRouter will give you the operation that you want with ease and peace of mind at an affordable price.
